

Safety is the highest priority at the Chip-scale Photonics Testing Facility. Building occupants and users may take comfort in knowing that the facility operates in strict adherence with all local and federal laboratory standards.

Users learn about laser safety and the facility emergency evacuation procedures during the mandatory safety orientation given by facility staff prior to being granted access. All safety policies and procedures are outlined in the Chip-scale Photonics Testing Facility Policies and Procedures document, which is required reading for all new users - policy requires new users to pass an exam based on this document. In addition, all users are required to take an annual safety exam in order to maintain access to the facility. In summary, the Chip-scale Photonics Testing Facility goes to great lengths to insure the safety of everyone in and around the facility.

Essential Phone Numbers pertaining to Environment, Health and Safety may be found at the following link:
